Sound Technology for Life

Oval: Ultimate Speaker Design.

Created by skilled sculptors using over 100 years old solid wood.
Rated power 15w stereo. 14cm by 16cm, 950g each. 60-20kHz response.
supplied with wooden speaker stands and PC TripleC cables

A truly good sound invites a secret energy into our lives that makes your inner, unknown beauty bloom. All our sound systems fill your room with the energy of nature, life and forest.

designer Ritsuko Yoshimeki

Since ancient times in Japan, sound has been said to be the spirit of words and to contain a mysterious power as an energy that moves even mountains.

For us, what our eardrum sensors perceive is only a part of the nature of sound energy, because the expression of sound has a valuable function in connecting us with nature, regulating our mind and body, and helping us to live a beautiful and healthy life, and that we must acknowledge that the sounds that can resonate with living creatures are generated by wave energies only by the vibrations of organic living tissue. This is why all Familylabo sound systems are made from hollowed-out solid wood.

This is following a very simple fact that all acoustic musical instruments everywhere on earth has been made from solid wood, that allows us to develop not only conventional audio devices but various applications of sound for our life.

Unfortunately, almost all speakers available in the market are made mainly out of petroleum products (MDF, or plastic), with only a thin surface treatment of wood. Even though they may sound the same to the eardrum sensors, the energy generated from the chemically synthesised material remains artificial.

Flora sound system

**Power rated 15w. Stereo speakers and amplifier.
Bluetooth and analogue RCA input.
Speaker cables, ceramic bases and power adaptor.**

An audio designed to fill space with the organic energy from the special all hand made wood speakers.

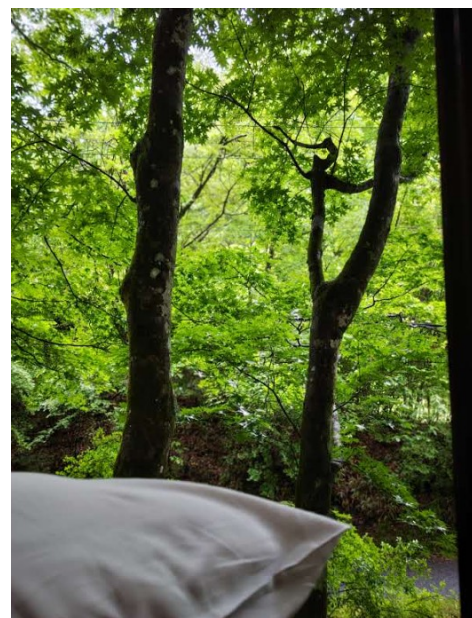

The sound energy emitted by the vibration of solid wood provides the energy of a natural forest bath to the living spaces of modern people surrounded by concrete and man-made objects. Just by being in a sound space, our bodies absorb sound energy through our skin to our entire body. This is because sound energy is transmitted most undampened in liquids, rather than in the air, so it travels freely through the body's tissues, of which about 70% is liquid, such as blood and body fluids. This is the basic of how our sound design serves to enrich our life.

Now a new sound system is designed that is intended not to be heard by the ear but mainly by hole body.

A high-performance vibrating speaker system has been developed that can transmit sound energy directly to the body without the need of air. This opens up a world of sound that goes beyond the audio world of listening to the new sound field that can be used in responce to various needs of life. For example, this system can greatly improves the quality of sleep when it is combined with our original pillow made from Hinoki cypress wood.

**Stereo speakers with amplifier
Bluetooth & analogue mini-stereo input
speaker cable and power adaptor.**

Original Sound Library

In Japan, our original music and sound created at our recording studio has been verified and practically applied in various fields to enrich people's lives. Now together with our sound systems, we will provide original sound library allowing users to download through Appri or others. Some are like conventional music and others are the sound of nature or special frequencies appealing to our brain, etc. This library includes special music and sound for:

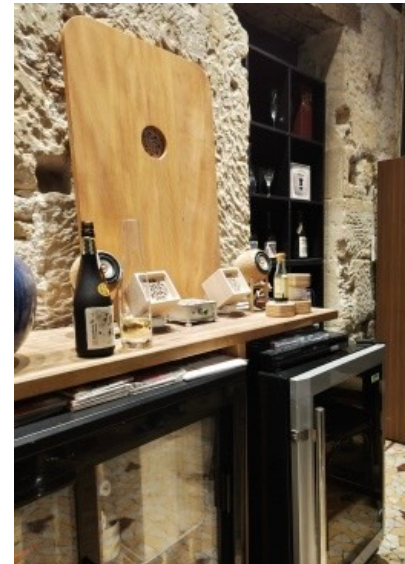

- At home
- At office
- Food and beverage (wine, sake, etc)
- Schools
- Restaurants
- Medical clinics
- Yoga studios and various treatment salons
- And other Sounds for various situations
(concentration, relaxation, good sleep, restore, meditation, etc.)

In France, a sound system for wine's fermentation was installed at the Domain Coste Chaude winery, from the year 2022.

Also, at our permanent Familylabo sound presentation space in Paris, Workshop ISSE Paris has been organizing sessions to realize how to improve the taste of various foodstuffs and drinks by making them listening to the special music from our sound library. 11 rue Saint Augustin 75002 Paris Tel: +33 1 42 96 26 74

Development of new incense & others from the sound processed water.

There are many similarities between sound and incense as energies that spread through space. Familylabo's incense is handmade using only medicinal herbs of Chinese herbal medicine, without adding any chemical products, and using our own sound technology applied to the pure water as an essential material. They are handmade with the application of unique sound technology. This new type of incense has a direct effect on your body and can be selected according to the scene of everyday life. Another special item is the Cosmo vessels, originally created using special materials processed by our sound technology for the ceremonial practice of serving coffee or tea.

Shikou: Poem incense series

Familylabo is established in 2018, by Kunihiko and Ritsuko Yoshimeki. Its head quarter is situated in the neighbourhood of the famous gold temple Kinkaku-ji at the heart of Kyoto. For over the last 40 years our members have been pursuing the nature and fascination of music, sound and its hidden potentials for the well beings of human life, while Ritsuko has been carrying on researches on oriental medical wisdom. Our newly opened factory at Inami allowed us to start creating solid wood made speakers by the hands of highly skilled sculptors, for the city is Japanese heritage site recognizing its around 300 years of wood carving traditions.

Ultimate sustainability in production

Since ancient times, traditional wood industry takes care of good conditions of mountains and forests
Every wood materials we use are naturally seasoned solid woods including over 100 years wooden pillars
used in old traditional houses, recycling woods over and over again.

All electric circuits is handwired by engineers so it can be serviced even after 50 years.
