

Flora F01Fa Sound System by Family Labo

New Audio system with a therapeutic forest walk effect
Meticulously handcrafted by Japanese craftsmanship

The inspiration of this unique design was provided at our first visit to the holy spring of Lourdes in France realizing its marvelous stories of miraculous cure. We dreamed that the flow of energy coming from our audio system may be comparable to the pure stream of water that nurses people.

Then our new speaker box features natural Hinoki wood, treasured in Japan since ancient times for its powerful therapeutic effects and aroma. They are handmade one by one by traditional craftsmen in Hida region specialized in curving Hinoki so that the natural power of wood will generate a beautiful flow of sound energy and aroma as if one is enjoying a refreshing walk in the forest. It may also serve you to enter a world of creative imaginations, meditation experience in the depth of sea and high mountain, etc. Its compact design and nature of product as a handmade craftwork will sure to add joyful and beautiful colors to your life.

Technical features

1: Create an audio system as a musical instrument is our basic policy

For the last 20 years, we have been designing new audio systems integrating electronic circuits into the structure and materials used for an acoustic musical instrument, and close technical discussions and cooperations with traditional craftsmen in Hida allowed us to produce this new model with an affordable price. Only one block solid wood is used and inner structure is caved out by hands to shape a horn design. The front panel is effectively serving in this respect like a sound hole of a string instrument. This fine design is contributed by the master luthier Nazih Ghadban taken after the sound hole of an ancient instrument "oud", the roots of lute and classical guitars. So persistent pursuit for a truly natural and nourishing sound to our life led us to this unique design and like any good musical instruments, our speaker adds extra high and low harmonics to the sound source, the music directly generated by the speaker unit, and richly and acoustically amplify the sound dispersions into the space.

2: Only solid wood can generate therapeutic and healthy sound energy

As the result, the rich harmonics generated from the solid wood is the essential thing for us. The sound of living organisms and life, can never be realized from speakers made of an artificial materials such as veneer wood coated one or MDF (Medium Density Fiberboard). Indifferent to the price range, the extremely clean, rich and pure energy coming out from this relatively small package will be beyond one's imagination; it naturally reverberates with and penetrates into our mind and body.

OFC

PC Triple C

3: Internal circuit is using only PC TripleC wires and cables

Another essential feature of our system is the quality of cables and wires. After the end of the production of PCOCC, new team was formulated in Japan finally to announce the debut of ever higher quality audio signal material, PC TripleC, not as a mere replacement of PCOCC but as the ultimate answer to any demanding audio products. Our Familylabo products are built using only PC Triple C in every audio signal pathes.

4: All electric components are hardwired by skilled engineers
Our amplifier as an essential part of “the musical instrument” is also hand assembled and every electronic components is soldered point to point by the hands of skilled engineers, which is known as an ideal method of building a boutique amp, not to mention that every parts are selected from the special audio grade products.

5: Handcrafted ceramic speaker insulators with cutting edge technology
Our special sound technology has been applied to produce an insulter for a concert piano and has been appreciated as a new tool that can add more energetic impression on the sound of the piano. V shaped insulators for our speakers are developped from our experiments with the piano and handcrafted in a traditional ceramic art factory in Seto region, the heart of ceramic art in Japan. Its is finished by the luster paints technic of the ancient Persian ceramic art.

6: Flexible installation

Two V shape insulators allow either rhombus or square speaker installation with different angle. Further, cramp tools can be attached to the speakers if one wants to suspend them from the ceiling.

Specifications

Speaker:

Power handling: 15W (30W Max)
Frequency response: 80Hz to 20KHZ
Dimension: W105, H105, D105(mm)
Weight: 750g each

Amplifier:

Input: Analogue RCA stereo inputs
Power Output: 10W 2 channels
Frequency response: 20 to 20K Hz
Total Harmonic Distortion: 0.01% (8 Ohm 1W)
Dimension: W140, H65, D140 Weight: 550g

Attachment:

2 speaker insulators made of ceramic
Original PC TRIPLE C 1 meter stereo speaker câbles
12V 5A Power adapter with 1.2 meter power cable.
(100V-240V)

Special Version

Inami sculpture model

- This is the special version with a hand-carving sculpture by a traditional artist from the town of Inami, a Japanese historical site famous for its three hundred years of woodcarving tradition. This does not affect the audible sound characters, but adds a more cheerful atmosphere to your room. You can choose either one or both carvings on the speaker surface.

The design of the symbol will vary depending on the sculptor.

Historic view of Inami city

Sculptor Mr. Komei Tanaka

Walnut version

- While our basic model uses special Japanese aromatic wood, Hinoki, for those who are more concerned about the faithful reproduction of the lower frequencies, we offer a walnut version for its special audio character. The front sound panel remains Hinoki wood for its excellent high frequency response and this combination gives a unique musical sound dispersion as an alternative to our basic model.

Attachement

Walnut wood speaker base

This speaker base is made of walnut wood to optimize the sound while the sound of the base model is more influenced by the material and shape of the table on which it is placed. It also gives the system the fuller visual effects.

The PC Triple C Stereo Audio Cable

We have developed our original PC Triple C cable with a length of 1 meter. All important wires and cables of our sound system uses the same material, so this combination gives maximum audio quality. Available either as an RCA to RCA stereo cable, or as a stereo mini jack to stereo RCA cable.
